

EUCLIDEAN GEOMETRY: SIMILARITY

OUTCOMES:

1. Equiangular triangles (all three angles equal) are similar
2. If the corresponding sides of two triangles are in the same proportion, then the triangles are similar

INTRODUCTION:

Let's go back to the previous grades and review congruency for triangles.

CONGRUENCY($\equiv$): Two triangles are congruent if they have the same shape and size. Thus the two triangles are identical, the corresponding angles are the same and the corresponding sides are equal.

Two triangles are congruent if they have:

- 3 sides the same length:
(S; S; S)
- 2 sides and an included angle:
(S; A; S)
- 2 angles and a side equal:
(A; A; S)
- A right angle, hypotenuse and a side equal: (R; H; S) INVB

In $\triangle ABC$ and $\triangle ADC$:

1. $\widehat{BAC} = \widehat{DAC}$ given
2. $\widehat{BCA} = \widehat{DCA}$ given
3. AC is common

$$\therefore \triangle ABC \equiv \triangle ADC \text{ (A; A; S)}$$

Since they are congruent, we can say now that: $\widehat{B} = \widehat{D}$; $AB = AD$ and $BC = DC$

GRADE 12 – WORKSHEET 6

SIMILARITY(||||): Polygons (A **polygon** is a flat, two-dimensional (2D) **shape** with straight sides that is fully closed, all the sides are joined up) are **similar** if they have the **same shape**. If two polygons are similar, the one is an **enlargement** of the other.

Two polygons are similar if and only if:

- All pairs of corresponding angles are equal **AND**
- All pairs of corresponding sides are in the same proportion. **Both** of these conditions have to be met for two polygons to be **similar**.

Example: These two rectangles are similar to each other as are the three pentagons.

	Note $\frac{AD}{PR} = \frac{AB}{PQ} = \frac{BC}{QS} = \frac{CD}{RS} = 2 \quad \therefore$ corresponding sides are in proportion. $\hat{A}=\hat{P}, \hat{B}=\hat{Q}, \hat{C}=\hat{S}$ and $\hat{D}=\hat{R} \therefore$ equiangular as corresponding angles are equal. $\therefore$ the two rectangles are similar to each other. We write this as $ABCD \parallel\parallel PQRS$.
--	--

For Triangles, any one of these two conditions is sufficient to guarantee similarity.

Hence in any two triangles if:

1. All pairs of corresponding angles are equal, then the two triangles are similar, **OR**
2. If all pairs of corresponding sides are in the same proportion, then the two triangles are similar.

If one of the conditions is true for two triangles, then the other condition is automatically also true.

GRADE 12 – WORKSHEET 6

NOTATION

$\triangle XYZ \parallel \triangle MNP$ means ‘triangle XYZ is similar to triangle MNP ’. The **order** in which the letters are written is very important, as it indicates **which angles are equal**.

Hence:

$$\hat{X} = \hat{M}, \hat{Y} = \hat{N} \text{ and } \hat{Z} = \hat{P}.$$

The order also indicates which **ratios of sides are equal**: $\triangle XYZ \parallel \triangle MNP$

$$\frac{XY}{MN} = \frac{YZ}{NP} = \frac{XZ}{MP} \quad \text{or} \quad \frac{XY}{YZ} = \frac{MN}{NP}$$

$$\text{or} \quad \frac{XY}{XZ} = \frac{MN}{MP} \quad \text{or} \quad \frac{YZ}{XZ} = \frac{NP}{MP}$$

WORKED EXAMPLE 1:

In the diagram below, $\triangle MVT$ and $\triangle AKF$ are drawn such that $\hat{M} = \hat{A}$, $\hat{V} = \hat{K}$ and $\hat{T} = \hat{F}$

Use the diagram to prove the theorem which states that if two triangles are equiangular, then the corresponding sides are in proportion, that is

$$\frac{MV}{AK} = \frac{MT}{AF}$$

Construction:

Draw line BC such the $MB = AK$ and $MC = AF$

GRADE 12 – WORKSHEET 6

Proof:

In $\triangle BMC$ and $\triangle KAF$

$MB = AK$ [Construction]

$\hat{M} = \hat{A}$ [Given]

$MC = AF$ [Construction]

$\triangle BMC \equiv \triangle KAF$ [s.s.s.]

$\therefore \hat{MBC} = \hat{AKF}$ or $\hat{MCB} = \hat{AFK}$ [$\equiv \Delta$]

BUT:

$\hat{V} = \hat{K}$ or $\hat{T} = \hat{F}$ [Given]

$\therefore \hat{MBC} = \hat{V}$ or $\hat{MCB} = \hat{T}$

But these are corresponding $\angle$ s

$\therefore BC \parallel VT$ [corresponding $\angle$ s =]

$\therefore \frac{MV}{MB} = \frac{MT}{MC}$ [proportionality theorem; $BC \parallel VT$]

BUT:

$MB = AK$ and $MC = AF$ [construction]

$\therefore \frac{MV}{AK} = \frac{MT}{AF}$

WORKED EXAMPLE 2:

Diameter AME of circle with centre M bisects $\widehat{FAB}$. MD is perpendicular to the chord AB . ED produced meets the circle at C , and CB is joined.

a) Prove $\triangle AEF \parallel \triangle AMD$

(5)

HINT: Highlight the triangles you working with

GRADE 12 – WORKSHEET 6

d)	Prove $AD^2 = CD \cdot DE$ (3) <table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left; color: red;">Statement</th><th style="text-align: left; color: red;">Reason</th></tr> </thead> <tbody> <tr> <td>$\frac{CD}{AD} = \frac{DB}{DE} = \frac{CB}{AE}$</td><td>($\parallel \Delta$s)</td></tr> <tr> <td>$\therefore CD \cdot DE = AD \cdot DB$</td><td></td></tr> <tr> <td>But $AD = DB$</td><td>($MD \perp AB$, M is centre, thm 1)</td></tr> <tr> <td>$\therefore CD \cdot DE = AD \cdot AD$</td><td></td></tr> <tr> <td>$\therefore AD^2 = CD \cdot DE$</td><td></td></tr> </tbody> </table>	Statement	Reason	$\frac{CD}{AD} = \frac{DB}{DE} = \frac{CB}{AE}$	($\parallel \Delta$ s)	$\therefore CD \cdot DE = AD \cdot DB$		But $AD = DB$	($MD \perp AB$, M is centre, thm 1)	$\therefore CD \cdot DE = AD \cdot AD$		$\therefore AD^2 = CD \cdot DE$	
Statement	Reason												
$\frac{CD}{AD} = \frac{DB}{DE} = \frac{CB}{AE}$	($\parallel \Delta$ s)												
$\therefore CD \cdot DE = AD \cdot DB$													
But $AD = DB$	($MD \perp AB$, M is centre, thm 1)												
$\therefore CD \cdot DE = AD \cdot AD$													
$\therefore AD^2 = CD \cdot DE$													

Using sides to prove that triangles are similar

If the corresponding sides of two triangles are in the same proportion, then the triangles are equiangular and hence similar.

Given: $\triangle ABC$ and $\triangle DEF$ with

$$\frac{AB}{DE} = \frac{AC}{DF} = \frac{BC}{EF}$$

Conclusion: $\hat{A} = \hat{D}$, $\hat{B} = \hat{E}$, $\hat{C} = \hat{F}$ and hence $\triangle ABC \parallel \triangle DEF$.

Reason: sides of Δ s in prop

WORKED EXAMPLE 3:

In the sketch below, $AP = 16\text{cm}$, $PB = 14\text{cm}$, $AQ = 20\text{cm}$, $QC = 4\text{cm}$ and $BC = 27\text{cm}$.

Prove that :

GRADE 12 – WORKSHEET 6

a)	$\Delta APQ \parallel \Delta ACB$ $\frac{AP}{AC} = \frac{16\text{cm}}{24\text{cm}} = \frac{2}{3}$ $\frac{PQ}{CB} = \frac{18\text{cm}}{27\text{cm}} = \frac{2}{3}$ $\frac{AQ}{AB} = \frac{20\text{cm}}{30\text{cm}} = \frac{2}{3}$ $\therefore \frac{AP}{AC} = \frac{PQ}{CB} = \frac{AQ}{AB}$ $\therefore \Delta APQ \parallel \Delta ACB$ (sides of Δ s in prop.)
b)	PBCQ is a cyclic quadrilateral. Highlight the cyclic quadrilateral you working with $\hat{P}_1 = \hat{C}$ ($\parallel \Delta$s) [$AP_1Q_1 \parallel ACB$, MEANING: $\angle A = \angle A$ $\angle P_1 = \angle C$ $\angle Q_1 = \angle B$ $\therefore$ PBCQ is a cyclic quad. (ext $\angle$ of quad = int opp$\angle$)
WORKED EXAMPLE 4: In the sketch alongside, AP is a tangent to the circle at P. PN $\parallel$ SR Prove that :	

GRADE 12 – WORKSHEET 6

a)	$\frac{PS}{QR} = \frac{ST}{RT}$ ΔPST and ΔQRT are both triangles in the sketch, hence we will attempt to prove that ΔPST and ΔQRT are similar. <table border="0" style="width: 100%;"> <thead> <tr> <th style="text-align: left; width: 50%;">Statement</th><th style="text-align: left; width: 50%;">Reason</th></tr> </thead> <tbody> <tr> <td>In ΔPST and ΔQRT:</td><td></td></tr> <tr> <td>$\hat{P}_2 = \hat{Q}_1$</td><td>($\angle$s in same segment also you can say subtended chord SR)</td></tr> <tr> <td>$\hat{S}_2 = \hat{R}_1$</td><td>($\angle$s in same segment also you can say subtended chord PQ)</td></tr> <tr> <td>$\hat{T}_1 = \hat{T}_3$</td><td>(3rd $\angle$ of Δ)</td></tr> <tr> <td>$\therefore \Delta PST \parallel \Delta QRT$ ($\angle\angle\angle$)</td><td><u>PAY SPECIAL ATTENTION TO THE ORDER OF THE LETTERS</u></td></tr> <tr> <td>$\therefore \frac{PS}{QR} = \frac{ST}{RT}$</td><td>($\parallel \Delta$s)</td></tr> </tbody> </table>	Statement	Reason	In ΔPST and ΔQRT :		$\hat{P}_2 = \hat{Q}_1$	($\angle$ s in same segment also you can say subtended chord SR)	$\hat{S}_2 = \hat{R}_1$	($\angle$ s in same segment also you can say subtended chord PQ)	$\hat{T}_1 = \hat{T}_3$	(3 rd $\angle$ of Δ)	$\therefore \Delta PST \parallel \Delta QRT$ ($\angle\angle\angle$)	<u>PAY SPECIAL ATTENTION TO THE ORDER OF THE LETTERS</u>	$\therefore \frac{PS}{QR} = \frac{ST}{RT}$	($\parallel \Delta$ s)
Statement	Reason														
In ΔPST and ΔQRT :															
$\hat{P}_2 = \hat{Q}_1$	($\angle$ s in same segment also you can say subtended chord SR)														
$\hat{S}_2 = \hat{R}_1$	($\angle$ s in same segment also you can say subtended chord PQ)														
$\hat{T}_1 = \hat{T}_3$	(3 rd $\angle$ of Δ)														
$\therefore \Delta PST \parallel \Delta QRT$ ($\angle\angle\angle$)	<u>PAY SPECIAL ATTENTION TO THE ORDER OF THE LETTERS</u>														
$\therefore \frac{PS}{QR} = \frac{ST}{RT}$	($\parallel \Delta$ s)														
b)	$\frac{PQ}{PT} = \frac{SR}{ST}$ ΔPQT and ΔRST are both triangles in the sketch, hence we will attempt to prove them similar. <table border="0" style="width: 100%;"> <thead> <tr> <th style="text-align: left; width: 50%;">Statement</th><th style="text-align: left; width: 50%;">Reason</th></tr> </thead> <tbody> <tr> <td>In ΔPQT and ΔRST:</td><td></td></tr> <tr> <td>$\hat{P}_3 + \hat{P}_4 = \hat{S}$</td><td>($\angle$s in same segment)</td></tr> <tr> <td>$\hat{Q}_2 = \hat{R}_2$</td><td>($\angle$s in same segment)</td></tr> <tr> <td>$\hat{T}_4 = \hat{T}_2$</td><td>(3rd $\angle$ of Δ)</td></tr> <tr> <td>$\therefore \Delta PQT \parallel \Delta RST$ ($\angle\angle\angle$)</td><td><u>PAY SPECIAL ATTENTION TO THE ORDER OF THE LETTERS</u></td></tr> <tr> <td>$\therefore \frac{PQ}{PT} = \frac{SR}{ST}$</td><td>($\parallel \Delta$s)</td></tr> </tbody> </table>	Statement	Reason	In ΔPQT and ΔRST :		$\hat{P}_3 + \hat{P}_4 = \hat{S}$	($\angle$ s in same segment)	$\hat{Q}_2 = \hat{R}_2$	($\angle$ s in same segment)	$\hat{T}_4 = \hat{T}_2$	(3 rd $\angle$ of Δ)	$\therefore \Delta PQT \parallel \Delta RST$ ($\angle\angle\angle$)	<u>PAY SPECIAL ATTENTION TO THE ORDER OF THE LETTERS</u>	$\therefore \frac{PQ}{PT} = \frac{SR}{ST}$	($\parallel \Delta$ s)
Statement	Reason														
In ΔPQT and ΔRST :															
$\hat{P}_3 + \hat{P}_4 = \hat{S}$	($\angle$ s in same segment)														
$\hat{Q}_2 = \hat{R}_2$	($\angle$ s in same segment)														
$\hat{T}_4 = \hat{T}_2$	(3 rd $\angle$ of Δ)														
$\therefore \Delta PQT \parallel \Delta RST$ ($\angle\angle\angle$)	<u>PAY SPECIAL ATTENTION TO THE ORDER OF THE LETTERS</u>														
$\therefore \frac{PQ}{PT} = \frac{SR}{ST}$	($\parallel \Delta$ s)														
c)	$PM \cdot ST = RS \cdot MT$														

GRADE 12 – WORKSHEET 6

Prove that $\triangle MPT$ and $\triangle RST$ are similar.

Statement

Reason

In $\triangle MPT$ and $\triangle RST$:

$$\hat{P}_3 = \hat{R}_2$$

(alt $\angle$ s ; $PN \parallel SR$)

$$\hat{M}_1 = \hat{S}_3$$

(alt $\angle$ s ; $PN \parallel SR$)

$$\hat{T}_4 = \hat{T}_2$$

(3^{rd} $\angle$ of Δ)

$$\therefore \triangle PMT \parallel \triangle RST \quad (\angle\angle\angle)$$

$$\therefore \frac{PM}{RS} = \frac{MT}{ST}$$

$$\therefore PM \cdot ST = RS \cdot MT$$

d) $AP^2 = AR \cdot AS$

Prove that $\triangle APS$ and $\triangle APR$ are similar.

Statement

Reason

In $\triangle APS$ and $\triangle APR$:

$$\hat{P}_1 = \hat{R}_2$$

(tan chord thm)

$$\hat{A} = \hat{A}$$

(common)

$$\hat{S}_1 = \hat{P}_1 + \hat{P}_2$$

(3^{rd} $\angle$ of Δ)

$$\therefore \triangle PAS \parallel \triangle RAP$$

($\angle\angle\angle$)

$$\therefore \frac{PA}{RA} = \frac{AS}{AP}$$

($\parallel \Delta$ s)

$$\therefore AP^2 = AR \cdot AS$$

GRADE 12 – WORKSHEET 6

HOMEWORK ACTIVITY

- 1 In the sketch below, $AB \parallel DE$ and $AC \parallel FE$

Prove that:

- a) $\triangle BCA \parallel \triangle DFE$
b) $AB \cdot EF = AC \cdot ED$

- 2 In the sketch below, SR is a tangent to circle PST at S.

Prove that:

- a) $\triangle PRS \parallel \triangle SRT$
b) $RS^2 = PR \cdot RT$
c) $\triangle PQR \parallel \triangle PTS$

GRADE 12 – WORKSHEET 6

d)	$\frac{RT}{PT} = \frac{RS^2}{PQ \cdot PS}$
3	In the sketch alongside, $KL = 20\text{m}$, $KN = 10\text{m}$, $MN = 4\text{m}$, $KM = 8\text{m}$ and $LM = 21\text{m}$.  Prove that :
a)	$\triangle KMN \sim \triangle LKN$
b)	KN is a tangent to circle LMK at K.
4	In the sketch below, prove that 
a)	$\frac{AB}{ED} = \frac{AP}{EP}$
b)	$AE \cdot CD = AC \cdot BD$
